

## A webpage that for an NGO to spread awareness on malnutrition in school children in Teach for India

### Methodology and Limitations:

**Users:** The end users for your project will be potential donors, stakeholders working in schools or people trying to educate themselves.

**Create your wireframe:** Wireframes define the functionality and all the elements on your webpage. For your project, you will create a wireframe on figma

**Design the prototype:** Prototype adds design elements to wireframes. In this step you will decide exactly what the website will look like. You will use figma for prototyping as well.

**Code the website:** You will use HTML, CSS and Javascript to create your website.

**Testing website:** UI testing involves functional and performance testing. For the scope of this project, you will test the functionality of your website manually. Further, use Google pagespeed Insights to test the performance of your webpage.
